

Online Appendix

Rebel constituencies and rebel violence against civilians in civil conflicts

Martin Ottmann

This Online Appendix presents the ZINB regression results of a series of alternative specification of the main models presented in the manuscript (Tables A1 to A6). It also displays the marginal effect plots of the estimated interactions between the three rebel constituency variables and the variables measuring rebels' ethnic appeals, resource financing and relative military strength (Figure A1.)

Table A1. ZINB regression with dependent variable logged
